

Green Seed of the Week

A weekly sustainability tip for our Q300 Community

Get a reusable or permanent liquid soap dispenser.

Using a reusable liquid soap dispenser instead of buying one-time-use plastic bottles of soap can save a lot. Making the switch to bars for your personal care items is even more impactful! These two easy changes will save in transporting goods to market which reduces costs, saves you \$ and reduces energy consumption and waste pollution.

Single use plastic bottles never go away. Yes, some can be recycled but eventually they all break down into microscopic particles. These micro-plastics contaminate our environment, pollute our food and water sources and even decrease fertility rates. Plastics production itself is also a significant contributor to climate change and cancer.

Reduction Meter - This week's tip benefits our planet and ourselves by reducing:

Waste

Fossil Fuel Usage

Industrial Processing

Transport Pollution
