

Green Seed of the Week

A weekly sustainability tip for our Q300 Community

Listen to, read about and support women fighting for our planet.

In honor of the women in our lives, we're highlighting the contributions of three pioneering women whose contributions help fight the climate crisis.

Rachel Carson, author of Silent Spring (1962), is considered the founder of the contemporary environmental movement.

Eunice Newton Foote (b.1819), was a scientist who first predicted the greenhouse gas effect, whereas Earth's temperature would rise with more carbon dioxide in the atmosphere.

Vandana Shiva, a physicist and activist, has been fighting for biodiversity and sustainable agriculture by challenging the forced use and dependence on pesticides and synthetic fertilizers by corporate and government interests since 1980.
